

In an environment where accountability is of critical importance, the need for timely, meaningful information is essential.

Each educator in your district, from the classroom to the district office, has a unique need for information. That is why we developed SwiftKnowledge, a 100% web based information solution. This simple to use, yet sophisticated solution, is designed for the non-technical user. With SwiftKnowledge, data-driven decision making becomes a reality for teachers, principals and district leaders to help drive school improvement.

"We were in no position to handle the increased flow of student accountability data and the expanded user base. Each of these users needed their own custom view and unique subset of the data. We looked for a solution that provided diverse and secure views of the information automatically, instantly and intuitively. That's why we chose SwiftKnowledge."

Hayford Gyampoh
CIO, Arizona Department of Education

Powerful functionality and valuable benefits—all via a web browser.

No matter where your district is in the data management process, from specialized databases to a sophisticated data warehouse, SwiftKnowledge can be the single interface to help maximize your existing investment in data resources.

Access

- Provide instant, browser-based access to non-technical users.
- Tailor information easily to the end-users needs—delivered as static reports or dynamic data.

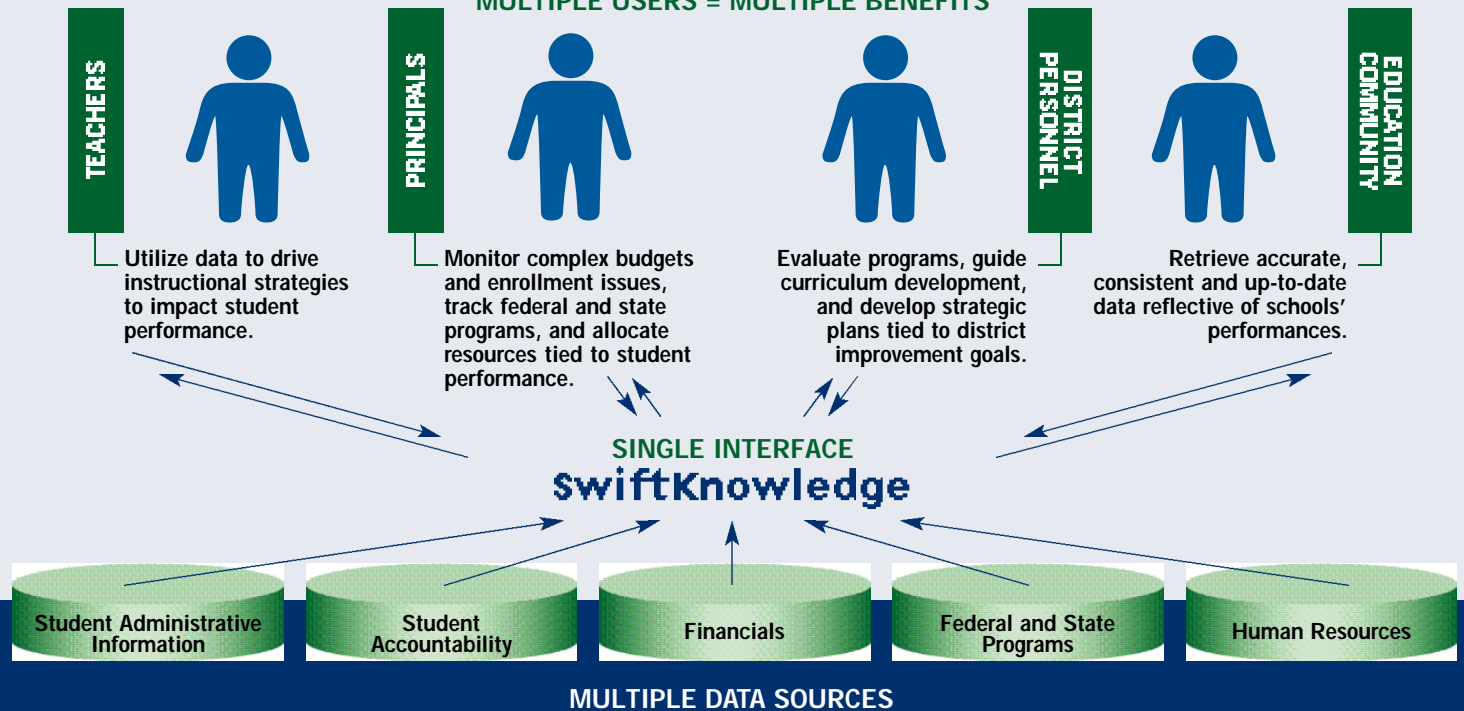

Analyze

- Promote inquiry-based analysis—taking educators from the 'what' to the 'why'.

Share

- Disseminate customized information with total security.
- Publish printed reports or share with others online.

MULTIPLE USERS = MULTIPLE BENEFITS

Simple to install - districts are operational within a few hours with minimal technical support.

Simple to maintain - all maintenance is done at the server level—eliminating the need for desktop support.

Simple to access - browser-based interface to enable access from anywhere, anytime.

Simple to use - intuitive design with drag and drop features eliminates the need for costly end-user technical training.

Simple to secure information - an innovative security system controls field-by-field data and user-by-user privileges.

Simple to share - data findings can be printed or delivered online to facilitate school and district communication and collaboration.

“SwiftKnowledge is a breakthrough product. It has the potential to change the way we make decisions. With SwiftKnowledge our district and school-based personnel can dig deeper into the data to look for patterns, explore connections, and draw conclusions all based on timely data.”

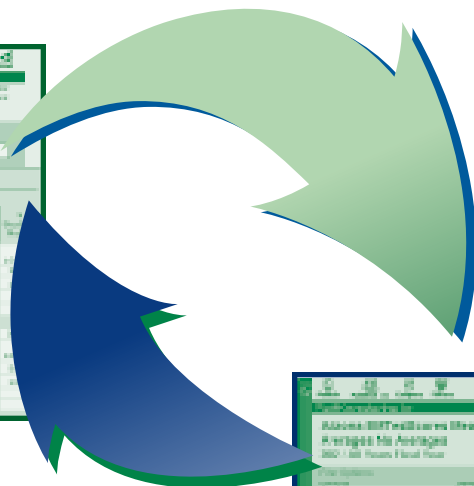

Sheldon Ramnarine, Ph.D

Assistant Director, Department of Educational Technology, Saint Paul Public Schools, MN

With swiftKnowledge, access the information you need and work interactively between multiple data views in order to make optimal decisions.

A screenshot of the SwiftKnowledge software interface. The main window displays a table titled "Alliance 8th/9th/10th/11th/12th Math Level by School and Year". The table has columns for "Year", "School", "Math Level", "Number of Students", "Average Score", and "Standard Deviation". The data is organized into a tree view on the left, showing a hierarchy from "Alliance" down to individual schools and then to specific math levels for each year.

Math scores across multiple schools and years
