## US Patent and Trademark Office approves SwiftKnowledge security patent application

### Core security component facilitates ease of administration while providing powerful cell level security

**Minneapolis, MN---January, 2006---**SwiftKnowledge, a business intelligence software and services company, recently received notice of allowance from the US Patent and Trademark Office for their patent application covering the security component embedded in the SwiftKnowledge application. SwiftKnowledge's security system has uniquely combined web-based delivery, flexibility, and ease of administration with the privacy demanded in an environment with increasing compliance requirements.

As part of the SwiftKnowledge security system, each user, or group of users, is given a security profile and data access is checked down to the cell level to ensure proper access rights around all data sources. All SwiftKnowledge reports dynamically apply this security policy allowing one report to be created and disseminated to multiple end-users. The end-user's security profile will then determine the data within the report available for each end-user's viewing. A unique feature in the security software allows a user to view cumulative data without seeing the information behind the accumulation.

"Our customers have relayed to us that the ease of administering the SwiftKnowledge security system over the web was one of the major factors in selecting SwiftKnowledge as their BI solution. In addition, we have built the software so that it can be integrated with our customers' existing security systems and will be completely transparent to the end-user," stated Daniel Moloney, Ph.D., SwiftKnowledge President.

The final filing for the patent is scheduled for March, 2006.

#### **About SwiftKnowledge, Inc**

Since 1999, SwiftKnowledge has brought to market a new approach to business intelligence—an integrated, powerful, web-based reporting and analytic solution designed specifically for the non-technical end-user. This simple to use, yet sophisticated application, allows immediate, secure and customized access to multiple data sources for analysis, reporting and performance management. We partner with large and small organizations, across multiple industries, to both deliver a strategic new offering to their customer base and serve as an internal solution to drive company-wide data driven decision-making. In all cases, we offer a full range of services, staffed by experts, to ensure a project's success. [www.swiftknowledge.com](http://www.swiftknowledge.com)
